PAVEL CHERKASHIN

AI Systems Architecture & Mortgage Automation • 6-Month Automation Arc

San Francisco, CA (On-Site) | pavel@mindrock.capital | linkedin.com/in/pavelcherkashin | github.com/minutta

Hero Statement: *"I don't come to warm a chair. I build autonomous operational infrastructure, eliminate friction, and automate myself out of repetitive execution within 6 months—leaving behind self-driving verification systems, codified playbooks, and high-uptime underwriting pipelines."*

STRATEGIC THESIS: AI-NATIVE MORTGAGE OPS & UNDERWRITING AUTOMATION

Mortgage origination is the ultimate proving ground for autonomous AI systems: reviewing borrower loan files spans thousands of pages (W-2s, 1040 tax returns, paystubs, asset statements, disclosures), taking 4+ hours per loan file and creating massive operational drag. Copperlane's breakthrough with Penny—an autonomous AI loan officer compressing hours of manual review into minutes while maintaining strict human-in-the-loop underwriting approvals—is exactly where agentic architecture creates non-linear enterprise value. As a seasoned builder who has deployed $100M+ in tech/venture capital, architected autonomous multi-agent meshes, and engineered high-stakes compliance pipelines, I bridge the gap between foundation models and deterministic, production-grade mortgage ops. I operate on-site in SF on a dedicated 6-month arc to harden Penny's verification engines, build regression harnesses, and automate underwriting friction out of existence.

THE 6-MONTH AUTOMATION ARC (OPERATIONAL PRIORITIES & MILESTONES)

Months 1–2 **Verification & Eval**	**Deterministic Document Verification & Eval Harness:** Engineer synthetic and historical regression suites across multi-thousand-page borrower packets (1040 schedules, W-2s, P&L statements, paystubs). Implement deterministic discrepancy detection for DTI ratios, unverified debt obligations, and income stability to eliminate hallucination risks.
Months 3–4 **Borrower Comms Mesh**	**Autonomous Borrower Interactions & Discrepancy Mesh:** Scale Penny's interactive borrower communication workflows: real-time missing-document chases, automated drafting of letters of explanation (LOE), and discrepancy reconciliation. Enforce strict human-in-the-loop checkpoints for licensed loan officers before external dispatch.
Months 5–6 **LOS Scale & Hand-Off**	**Enterprise LOS Integrations & Autonomous Hand-Off:** Codify bi-directional connectors into core Loan Origination Systems (Encompass, LendingPad, Byte). Deploy end-to-end observability and underwriting compliance telemetry. Transition day-to-day coordination to automated agent swarms and trained underwriting leads, shifting into an ongoing advisory capacity.

CORE SYSTEMS & EXECUTION CAPABILITIES

- **High-Stakes Document Verification:** OCR/VLM ingestion, complex tax return parsing, multi-page financial statement reconciliation, deterministic discrepancy extraction.
- **Enterprise Scale & Capital:** $100M+ deployed across venture and tech assets; negotiated enterprise partner contracts, managed cap tables, institutional governance.
- **Autonomous Multi-Agent Swarms:** Event-driven workflows, agentic error-watchdogs, distributed queue orchestration, Python/Rust systems engineering.
- **Production Builder Ethos:** On-site in San Francisco; zero-drag builder mindset; rapid prototyping of evaluation harnesses and LOS integrations without bureaucratic overhead.

SELECTED CAREER TRACK RECORD

Managing Partner & Systems Architect — *Mindrock Capital / Vestor.In* (2016–Present)
- Managed $100M+ in tech and enterprise assets. Architected autonomous multi-agent operational mesh for automated verification, financial audit workflows, and real-time operational telemetry.

CEO & Founder — *Startup Temple & Global Innovation Platforms* (2012–2020)
- Scaled physical acceleration hubs and innovation centers in San Francisco, connecting 500+ frontier tech companies with enterprise partners, institutional investors, and capital syndicates.

Serial Founder & Systems Executive — *Enterprise Software & Tech Exits*
- Founded and scaled multiple venture-backed software ventures through successful enterprise M&A exits; deep technical expertise in distributed systems, real-time protocols, and automated operations.

Transparency & Mandate Note: Founder-facing application for Copperlane (YC W26) on-site in SF. Positioned as a builder leveraging autonomous multi-agent systems and shipped code rather than a conventional junior IC. Internal agent fleet throughput figures are omitted pending third-party audit. External MiniMax M3.1 Flash benchmark figures are excluded.
